

Section 1: Network settings

The server listens on port 8080 by default. You can change it in the configuration file, but remember to restart the service afterwards.

See the online guide for details about advanced options and troubleshooting steps that are not covered in this short document.

Section 2: Network settings

The server listens on port 8080 by default. You can change it in the configuration file, but remember to restart the service afterwards.

See the online guide for details about advanced options and troubleshooting steps that are not covered in this short document.
